(57) Abstract:

PROBLEM TO BE SOLVED: To make a packing loaded section of a saddle hold elastic force to increase press-contacted force to the packing and to promote sealing efficiency.

SOLUTION: One saddle 11 loading a packing is formed of an elastically deformable hard plastic, and the base section 11b of a corporation cock mounting section 11a is expanded inward to reduce the diameter. By the constitution, the base section 11b is elastically deformed outward and press-contacted to a fluid pipe firmly when both saddles 11 and 6 are fastened to the fluid pipe. By this constitution, the packing is always pushed to promote sealing efficiency.
